

COURSE DESCRIPTION CARD - SYLLABUS

Course name

DOCTORAL SEMINAR I [S5SD1>SEMD-I]

Course

Proposed by Discipline

–

Year/Semester

1/2

Level of study

Doctoral School

Course offered in

English

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

0

Laboratory classes

0

Other

0

Tutorials

0

Projects/seminars

10

Number of credit points

2,00

Coordinators

dr hab. inż. Łukasz Amanowicz prof. PP
lukasz.amanowicz@put.poznan.pl

dr hab. inż. Tomasz Bartkowiak prof. PP
tomasz.bartkowiak@put.poznan.pl

prof. dr hab. Alina Dudkowiak

dr hab. inż. Izabela Szczęch
izabela.szczech@put.poznan.pl

prof. dr hab. inż. Krzysztof Wisłocki
krzysztof.wislocki@put.poznan.pl

Prerequisites

Knowledge: PhD student has the knowledge resulting from the scope of completed university studies, necessary to implement the doctorate in the chosen discipline. **Skills:** PhD student is able to organize his own workshop using modern research methods; is able to formulate and verify research hypotheses, plan and conduct research and scientific experiments as well as analyze, interpret, critically evaluate, develop and present research results. **Social competencies:** PhD student is prepared to take social responsibility for studying at doctoral school; understands the need to deepen, update and popularize knowledge especially regarding the achievements of science and technology. Has the ability to work in a team, is open to cooperation with other people.

Course objective

Getting to know the general principles of preparing doctoral documentation in accordance with the PhD School requirements. Overview of the basic requirements for the preparation of doctoral dissertation, broadening the knowledge of PhD students concerning the ways to properly prepare and give oral presentations. Familiarizing PhD students with ways to revise existing paradigms, define the aim and subject of scientific research as well as form a research hypothesis and respect the principle of public ownership of the results of scientific activities, including the principles of intellectual property protection.

Course-related learning outcomes

Knowledge:

A PhD student who graduated from doctoral school knows and understands:

1. to the extent that enables revision of existing paradigms - global achievements, covering theoretical basis as well as general and selected specific issues, that are specific to scientific disciplines studied at the doctoral school, [P8S_WG/SzD_W01],
2. key developmental trends of science disciplines in which education takes place at the doctoral school, [P8S_WG/SzD_W02],
3. principles of promoting scientific activity results, also in an open access mode, [P8S_WG/SzD_W04],
4. basic conditions of knowledge transfer to the economic and social sphere as well as commercialization of the results of scientific activities and know-how related to these results. [P8S_WK/SzD_W07].

Skills:

A PhD student who graduated from doctoral school can:

1. use the knowledge from different branches of science to creatively identify, formulate and to innovatively solve complex problems or to execute research tasks in particular:
 - define the aim and subject of scientific research, form a research hypothesis,
 - develop research methods, techniques and tools and use them creatively,
 - draw conclusions on the basis of research results, [P8S_UW/SzD_U01],
2. critically analyze and assess scientific research results, work of experts and other creative activities together with their contribution into knowledge development, [P8S_UW/SzD_U02],
3. take part in scientific discourse, [P8S_UK/SzD_U07],
4. plan classes or groups of classes and teach with the use of modern methods and tools. [SzD_U11].

Social competencies:

A PhD student who graduated from the doctoral school is ready to:

1. critically assess the achievements within a given scientific discipline, [P8S_KK/SzD_K01],
2. critically evaluate their own contribution to the development of a given scientific discipline, [P8S_KK/SzD_K02],
3. maintain and develop the ethos of research and creative communities, including:
 - conducting independent scientific activity,
 - respecting the principle of public ownership of the results of scientific activities, including the principles of intellectual property protection. [P8S_KR/SzD_K07].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Assessment of oral presentation of IRP and assessment of doctoral students' answers to questions related to both the presentation and their knowledge of relevant discipline. Lecturer responsible for the seminar assesses the doctoral students' participation in the discussion during the seminar sessions and their involvement in preparing the presentation and the IRP.

The following grading scale is used to assess learning outcomes: very good (5.0), good plus (4.5), good (4.0), satisfactory plus (3.5), satisfactory (3.0), unsatisfactory (2.0). The subject is considered as not completed in the case of a grade of 2.0.

The following assignment of grades to percentage ranges of results is used:

above 50% - 60.0%: 3.0
above 60% - 70.0%: 3.5
above 70% - 80.0%: 4.0
above 80% - 90.0%: 4.5
above 90% - 100%: 5.0

Programme content

Discussing the key principles of organizing doctoral documentation according to the requirements of the PhD School, providing essential guidelines for preparing a doctoral dissertation, and expanding PhD students' knowledge on effectively preparing and delivering oral presentations.

Course topics

1. Ways to fill out: an Individual Research Plan (IRP), an Annual Report.
2. Introduction of main categories of transfer of scientific knowledge and scientific writing (public speaking, doctoral dissertations, scientific discussion, ethical principles in science and publishing).
3. Models of oral presentations - general principles of public speaking (defining the purpose, formulating research hypotheses, assessing one's own capabilities).
4. Presentation and discussion of the documents prepared by the PhD students (an Individual Research Plan, an Annual Report).

Teaching methods

Seminar, consultations on prepared documents, discussions on the presented doctoral projects.

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	10	0,50
Doctoral student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation)	40	1,50
